

Clinical Pilates

Pilates is a holistic form of exercise that is designed to retrain both the body and the mind. Emphasis is placed on creating the right body alignment, so that we can stand, sit and move with our bodies in the most efficient position. At Riseley we combine the benefits of Pilates with the science of exercise rehabilitation to produce Clinical Pilates.

Specialists in Back Pain

Core stability is one of the central concepts of Pilates – the trunk is the powerhouse of the body. Recent scientific research into muscular function is giving core stability unparalleled support in the rehabilitation of spinal injuries. Studies of the function of the deep abdominal and lower back muscles are showing that improving their coordinated function and strength is helping prevent as well as rehabilitate back injuries. And the same concept can be applied to other parts of the body.

Exercise Rehabilitation is not new to Physiotherapists. Pilates provides unique tools to be able to address the muscular control specifics of poor function and problem-solve the reason or the pathology behind the painful situation. With Clinical Pilates our Physiotherapists can significantly reduce your pain and improve your function.

Pilot research conducted in conjunction with students from Curtin University has shown that attendance at Riseley's Rehab Gym is positively correlated with reduced back pain and improved functional outcomes.

Program Details

Each session is approximately 1 hour long. In your first session your physiotherapist will conduct a thorough examination, including digital photography and video analysis. Upon explanation of the results a program will be individually developed for your needs and your training will commence. Subsequent sessions are supervised by the physiotherapist who progresses you at your own rate. Formal reassessment is undertaken regularly, including comparative digital imaging. Home programs are developed and as the exercise program is not aerobic, regular walking or swimming is recommended.

Results are quicker if attendance is initially two or three times per week. For hygiene please bring socks and a towel.

Once you are safe and proficient, it may be recommended that your ongoing program be supervised by our Pilates Instructors

Health Insurance Rebates

As a physiotherapist provides your Clinical Pilates service, every consultation is fully rebatable through your private health insurance.
